## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 5\_MCQ

Attempt : 1  
Total Mark : 15  
Marks Obtained : 15

#### **Section 1 : MCQ**

1. What will be the output of the following code?

```
class A {  
    int y = 30;  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        A a1 = new A();  
        A a2 = new A();  
        a1.y = 50;  
        System.out.println(a2.y);  
    }  
}
```

**Answer**

30

Status : Correct

Marks : 1/1

2. What will be the output of the following code?

```
class Person {  
    String name;  
    void setName(String n) {  
        name = n;  
    }  
    void printName() {  
        System.out.println(name);  
    }  
}  
  
class Test {  
    public static void main(String[] args) {  
        Person p = new Person();  
        p.printName();  
    }  
}
```

Answer

null

Status : Correct

Marks : 1/1

3. What will be the output of the following code?

```
class A {  
    int p = 5;  
    int q = 2;  
}  
  
class Main {  
    public static void main(String[] args) {  
        A obj = new A();  
        System.out.println(obj.p + obj.q);  
    }  
}
```

```
    }  
}
```

**Answer**

7

**Status : Correct**

**Marks : 1/1**

4. What will be the output of the following code?

```
class Box {  
    int length = 5;  
    int width = 4;  
  
    int area() {  
        return length * width;  
    }  
  
    public static void main(String[] args) {  
        Box b = new Box();  
        System.out.println("Area = " + b.area());  
    }  
}
```

**Answer**

Area = 20

**Status : Correct**

**Marks : 1/1**

5. What will be the output of the following code?

```
class Person {  
    int age = 18;  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Person p = new Person();  
        p.age += 2;
```

```
        System.out.println("Age: " + p.age);  
    }  
}
```

**Answer**

Age: 20

**Status : Correct**

**Marks : 1/1**

6. What will be the output of the following code?

```
class Sample {  
    int x = 10;  
  
    void display() {  
        System.out.println("x = " + x);  
    }  
  
    public static void main(String[] args) {  
        Sample s = new Sample();  
        s.display();  
    }  
}
```

**Answer**

x = 10

**Status : Correct**

**Marks : 1/1**

7. What will be the output of the following code?

```
class Test {  
    private int value;  
    Test(int value) {  
        this.value = value;  
    }  
    public int getValue() {  
        return value;  
    }  
}
```

```
    }  
    public class Main {  
        public static void main(String[] args) {  
            Test obj = new Test(10);  
            System.out.println(obj.value);  
        }  
    }
```

## Answer

## Compile-time error

**Status :** Correct

**Marks : 1/1**

8. What will be the output of the following code?

```
class A {  
    int val = 20;  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        A obj1 = new A();  
        A obj2 = obj1;  
        obj2.val += 5;  
        System.out.println(obj1.val);  
    }  
}
```

## Answer

25

**Status :** Correct

**Marks : 1/1**

9. What is the output of the following code?

```
class Box {  
    int height;  
    Box(int height) {  
        this.height = height;  
    }  
}
```

```
2415Sub002
}
void modifyHeight(Box b) {
    b.height += 10;
}
}
public class Main {
    public static void main(String[] args) {
        Box b1 = new Box(20);
        b1.modifyHeight(b1);
        System.out.println(b1.height);
    }
}
```

## Answer

30

**Status :** Correct

**Marks : 1/1**

10. What will be the output of the following code?

```
class Box {  
    int volume(int l, int b, int h) {  
        return l * b * h;  
    }  
}  
  
public class Main {  
    public static void main(String[] args) {  
        Box b = new Box();  
        System.out.println(b.volume(2, 3, 4));  
    }  
}
```

### Answer

24

**Status :** Correct

**Marks : 1/1**

11. What will be the output of the following code?

```
class Alpha {  
    void greet(String name) {  
        System.out.println("Hello " + name);  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Alpha obj = new Alpha();  
        obj.greet("Anu");  
    }  
}
```

## Answer

Hello Anu

**Status : Correct**

**Marks : 1/1**

12. What will be the output of the following code?

```
class Demo {  
    void printMessage() {  
        System.out.println("Hello from Demo");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Demo d = new Demo();  
        d.printMessage();  
    }  
}
```

## Answer

Hello from Demo

**Status :** Correct

**Marks : 1/1**

13. What will be the output of the following code?

```
class MathUtils {  
    int add(int x) {  
        return x + x;  
    }  
}  
  
public class Main {  
    public static void main(String[] args) {  
        MathUtils m = new MathUtils();  
        System.out.println(m.add(5));  
    }  
}
```

**Answer**

10

**Status : Correct**

**Marks : 1/1**

14. What will be the output of the following code?

```
class A {  
    int x = 50;  
}  
  
public class Main {  
    public static void main(String[] args) {  
        A obj1 = new A();  
        A obj2 = obj1;  
        obj2.x = 100;  
        System.out.println(obj1.x);  
    }  
}
```

**Answer**

100

**Status : Correct**

**Marks : 1/1**

15. What will be the output of the following code?

```
class Ball {  
    int size = 11;  
}  
  
class Game {  
    public static void main(String[] args) {  
        Ball b1 = new Ball();  
        Ball b2 = new Ball();  
        b2.size = 10;  
        System.out.println(b1.size);  
    }  
}
```

**Answer**

11

**Status :** Correct

**Marks :** 1/1

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 5\_Q2

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

You are working as a developer for CityBank, which wants to build a basic account management system.

Each customer at the bank has:

An Account Number (integer)  
A Customer Name (string)  
An Initial Balance (double)

The bank allows two types of transactions:

Deposit – increases the balance.  
Withdrawal – decreases the balance only if enough funds are available.

If the withdrawal amount is greater than the balance, the withdrawal should not happen, and the balance should remain the same.

You are required to implement this system using:

A class with attributes for account details. A constructor to initialize account details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customers.

Finally, display each customer's account details after all transactions.

### ***Input Format***

The first line of input contains an integer N, representing the number of customers.

For each customer:

- The next line contains the account number (integer).
- The following line contains the customer name (string).
- The next line contains the initial balance (double).
- The next line contains the deposit amount (double).
- The next line contains the withdrawal amount (double).

### ***Output Format***

For each customer, print the details in the following format:

1. Account Number: <account\_number>
2. Customer Name: <customer\_name>
3. Final Balance: <final\_balance> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 1

1234

Rahul Sharma

5000

2000

3000

Output: Account Number: 1234

Customer Name: Rahul Sharma

Final Balance: 4000.0

**Answer**

```
import java.util.Scanner;

class BankCustomer {

    private int accountNumber;
    private String customerName;
    private double balance;

    public BankCustomer(int accountNumber, String customerName, double
initialBalance) {
        this.accountNumber = accountNumber;
        this.customerName = customerName;
        this.balance = initialBalance;
    }

    public void deposit(double amount) {
        if (amount > 0) {
            this.balance += amount;
        }
    }

    public void withdraw(double amount) {
        if (amount > 0 && amount <= this.balance) {
            this.balance -= amount;
        }
    }

    public int getAccountNumber() {
        return this.accountNumber;
    }

    public String getCustomerName() {
        return this.customerName;
    }

    public double getBalance() {
        return this.balance;
    }
}
```

```
public void setCustomerName(String newName) {
    this.customerName = newName;
}

class BankSystem {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        int numCustomers = scanner.nextInt();
        scanner.nextLine();

        for (int i = 0; i < numCustomers; i++) {
            int accountNumber = scanner.nextInt();
            scanner.nextLine();
            String customerName = scanner.nextLine();
            double initialBalance = scanner.nextDouble();

            double depositAmount = scanner.nextDouble();
            double withdrawalAmount = scanner.nextDouble();

            BankCustomer customer = new BankCustomer(accountNumber,
                customerName, initialBalance);

            customer.deposit(depositAmount);
            customer.withdraw(withdrawalAmount);

            System.out.println("Account Number: " + customer.getAccountNumber());
            System.out.println("Customer Name: " + customer.getCustomerName());
            System.out.printf("Final Balance: %.1f%n", customer.getBalance());
        }

        scanner.close();
    }
}
```

##### **1. Problem Statement**

Neha is working as a developer for CityElectricity Board, which wants to build a household electricity billing system.

Each customer's electricity account has:

A Customer ID (integer) A Customer Name (string) Units Consumed (double)

The electricity bill is calculated based on these rules:

For the first 100 units 5 units charge per unit  
For the next 100 units (101–200) 7 units charge per unit  
For units above 200 10 units charge per unit  
If the total bill exceeds 2000 units, a 5% discount is applied on the final bill.

Neha has been asked to implement this system using:

A class with attributes for customer details. A constructor to initialize customer details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customers.

Finally, display each customer's details and final bill amount.

### ***Input Format***

The first line of input contains an integer N, representing the number of customers.

For each customer:

- The next line contains the Customer ID (integer).
- The following line contains the Customer Name (string).
- The next line contains the Units Consumed (double).

### ***Output Format***

For each customer, print the details in the following format:

Customer ID: <customer\_id>

Customer Name: <customer\_name>

Final Bill: <final\_bill> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 1

1001

Ravi Kumar

80

Output: Customer ID: 1001

Customer Name: Ravi Kumar

Final Bill: 400.0

### ***Answer***

```
// You are using Java
```

```
import java.util.Scanner;

class ElectricityCustomer {

    private int customerId;
    private String customerName;
    private double unitsConsumed;

    public ElectricityCustomer(int customerId, String customerName, double unitsConsumed) {
        this.customerId = customerId;
        this.customerName = customerName;
        this.unitsConsumed = unitsConsumed;
    }

    public double calculateBill() {
        double bill = 0.0;
        double remainingUnits = this.unitsConsumed;

        if (remainingUnits > 200) {
            bill += (remainingUnits - 200) * 10;
            remainingUnits = 200;
        }
        if (remainingUnits > 100) {
            bill += (remainingUnits - 100) * 7;
            remainingUnits = 100;
        }
        if (remainingUnits > 0) {
            bill += remainingUnits * 5;
        }

        if (bill > 2000) {
            bill = bill * 0.95;
        }

        return bill;
    }

    public int getCustomerId() {
        return this.customerId;
    }
}
```

```
